

## **LISTING OF THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-32. (Canceled)

33. (Currently Amended) A method of treating waste matter from animals, the method comprising:

- a) collecting waste matter from the animals;
- b) reversibly inhibiting urease activity in said collected waste matter; and
- c) separating said urease-activity inhibited waste matter into a urea-rich fraction essentially consisting of a liquid comprising urea and other components soluble in liquid manure and a urea-lean fraction;

d) recovering the urea-rich essentially liquid fraction obtained in step c); and

e) recovering the urea-lean fraction obtained in step c;

wherein said reversible inhibition of step b) comprises treating said collected waste matter by a method including at least one step selected from the group consisting of decreasing pH, buffering pH, at least one of decreasing and increasing pressure, at least one of decreasing and increasing ionic strength and combinations thereof.

34-35. (Canceled)

36. (Previously Presented) The method according to claim 33, said method further comprising the step of

d) irreversibly inhibiting urease activity in said urea-rich fraction wherein said irreversible inhibition comprises treating said urea-rich fraction with an irreversible inhibitor, said inhibitor being selected among the group consisting of

urea compounds selected from the group consisting of hydroxyurea, selenourea, phenylurea and thiourea;

benzoates selected from the group consisting of p-substituted mercuribenzoate, p-chloromercuribenzoate, p-hydroxymercuribenzoate and iodosobenzoate;

p-chloromercuribenzene sulfonate;

N-ethylmaleimide;

phosphor compounds selected from the group consisting of phosphoramidate and phosphate;

monovalent ions selected from the group consisting of F<sup>-</sup>, Na<sup>+</sup>, and K<sup>+</sup>;

divalent metal ions selected from the group consisting of Hg<sup>2+</sup>, Cu<sup>2+</sup>, Fe<sup>2+</sup>, Co<sup>2+</sup>, Zn<sup>2+</sup>, Ni<sup>2+</sup>, Mn<sup>2+</sup>, Cd<sup>2+</sup>, Ag<sup>+</sup>, Mg<sup>2+</sup> (weak), Ba<sup>2+</sup>, Pb<sup>2+</sup>,

and combinations thereof in form of at least one water-soluble salt, and/or at least one electrochemically-released ion;

As<sup>3+</sup>;

at least one nickel-complexing agent selected from the group consisting of dimethylglyoxime, ethylenediamine and combinations thereof, and

compounds selected from the group consisting of beta-mercaptoethanol, iodine, suramin, phenylsulfinate, and furacin.

37. (Canceled)

38. (Previously Presented) The method according to claim 36, wherein said urea-lean fraction is in form of a liquid, a solid, or a combination thereof, or in form of a dried solid.

39. (Previously Presented) The method according to claim 36, wherein said irreversible inhibitor is recovered from said irreversibly urease-activity inhibited and separated urea-rich fraction.

40. (Previously Presented) The method according to claim 33, wherein said waste-matter comprises feces and liquid manure from farm animals.

41. (Currently Amended) A urea-rich animal waste-matter product, the product comprising urea produced from a urea-rich fraction of waste matter from animals wherein the waste matter has been treated by a method as defined in claim 33, said product further comprising animal waste-matter indicators in a range of from 200 mmol/l to 5 µmol/l, said urea-rich animal waste-matter product exhibiting a reversible inhibition of urease catalytic activity.

42. (Previously Presented) The product according to claim 41, wherein said urea-rich fraction exhibits substantially no urease activity.

43. (Previously Presented) The product according to claim 41, wherein said urea-rich fraction exhibits minor residues of irreversibly urease-activity inhibitors.

44. (Canceled)

45. (Currently Amended) A method of producing thermosetting urea-formaldehyde plastic from waste matter of animals, the method comprising:

a) producing an essentially liquid urea-rich fraction of the waste matter from the animals by a method comprising:

i) collecting waste matter from the animals;

ii) inhibiting urease activity in said collected waste matter; and

iii) separating said urease-activity inhibited waste matter into a urea-rich fraction essentially consisting of a liquid comprising urea and other components soluble in liquid manure and a urea-lean fraction; said inhibition comprising reversible inhibiting urease activity of said collected waste matter before said separation of said urease-activity inhibited waste matter into said urea-rich fraction and said urea-lean fraction; and

b) reacting said urea-rich fraction with methanal.

46. (Previously Presented) The method according to claim 45, wherein said waste matter comprises feces and liquid manure from farm animals.

47. (Canceled)

48. (Canceled)

49. (Previously Presented) The method according to claim 36, wherein the divalent metal ions are selected from the group consisting of  $\text{Cu}^{2+}$ ,  $\text{Ag}^+$  and  $\text{Pb}^{2+}$ .

50. (Previously Presented) The method according to claim 42, wherein said urea-rich fraction exhibits less than 50 unit/ml urease activity.

51. (Previously Presented) The method according to claim 42, wherein said urea-rich fraction exhibits less than 20 unit/ml urease activity.

52. (Previously Presented) The method according to claim 42 wherein said urea-rich fraction exhibits less than 5 unit/ml urease activity.

53. (Previously Presented) The method according to claim 44, wherein said animal waste-matter indicators are selected from the group consisting of  $\text{Na}^+$ ,  $\text{K}^+$ ,  $\text{Ca}^{2+}$ ,  $\text{PO}_4^{2-}$ , bilirubin, albumin and uric acid.

Please add the following new claims:

54. (New) The method according to claim 45, said method further comprising the step of:

c) irreversibly inhibiting urease activity in said urea-rich fraction, wherein said irreversible inhibition comprises treating said urea-rich fraction with an irreversible inhibitor, said inhibitor being selected among the group consisting of:

urea compounds selected from the group consisting of hydroxyurea, selenourea, phenylurea and thiourea;

benzoates selected from the group consisting of p-substituted mercuribenzoate, p-chloromercuribenzoate, p-hydroxymercuribenzoate and iodosobenzoate;

p-chloromercuribenzenesulfonate;

N-ethylmaleimide;

phosphor compounds selected from the group consisting of phosphoramidate and phosphate;

monovalent ions selected from the group consisting of  $\text{F}^-$ ,  $\text{Na}^+$ , and  $\text{K}^+$ ;

divalent metal ions selected from the group consisting of  $\text{Hg}^{2+}$ ,  $\text{Cu}^{2+}$ ,  $\text{Fe}^{2+}$ ,  $\text{Co}^{2+}$ ,  $\text{Zn}^{2+}$ ,  $\text{Ni}^{2+}$ ,  $\text{Mn}^{2+}$ ,  $\text{Cd}^{2+}$ ,  $\text{Ag}^+$ ,  $\text{Mg}^{2+}$  (weak),  $\text{Ba}^{2+}$  and combinations thereof in form of at least one water-soluble salt, and/or at least one electrochemically-released ion;

As<sup>3+</sup>;

at least one nickel-complexing agent selected from the group consisting of dimethylglyoxime, ethylenediamine and combinations thereof, and

compounds selected from the group consisting of beta-mercaptoethanol, iodine, suramin, phenylsulfinate, and furacin.

55. (New) The method according to claim 54, wherein said irreversible inhibitor comprises divalent metal ions selected from the group consisting of Cu<sup>2+</sup>, Ag<sup>+</sup> or Pb<sup>2+</sup> and combinations thereof.

56. (New) The method according to claim 45, wherein said separating step comprises centrifugation or filtration.

57. (New) The method according to claim 56, said method further comprising subjecting said urea-rich fraction to ultra-filtration to produce a urea-rich permeate.

58. (New) The method according to claim 57, said method further comprising subjecting said urea-rich permeate to nano-filtration to produce a urea-rich nano-filtered permeate.

59. (New) The method according to claim 58, said method further comprising subjecting said urea-rich nano-filtered permeate to hyper-filtration to produce a urea-rich concentrate.

60. (New) The method according to claim 45, wherein the urea-rich fraction is reacted with methanol under acidic conditions.

61. (New) The method according to claim 45 further comprising concentrating the urea formaldehyde product.
